

AT&T Network-Based Firewall

Help protect your core infrastructure

Protect your network

Ever-changing security threats can place your business at risk. When it comes to data protection, maintaining a reliable network firewall is vital. AT&T Network-Based Firewall delivers highly secure connectivity by adding another layer of defense.

It's a subscription-based network security service that frees up your IT team for other tasks. Network-Based devices reside within AT&T owned and operated data centers that provide 24x7x365 firewall monitoring and attack management.

Increase control

AT&T Network-Based Firewall continuously inspects and treats inbound and outbound traffic according to your unique security policies. Gain increased management control through multiple levels of configuration complexities, ranging from simple outbound-only security rules to extensive bi-directional rules.

Improve efficiencies

AT&T Network-Based Firewall provides the visibility and flexibility you need through a self-administration portal. Quickly optimize firewall configurations, view reports, and bring order to security policies. As your network traffic needs change, you can quickly scale bandwidth allocation for Internet access through the firewall.

Potential benefits

- Eliminates need for premises-based firewalls and dedicated Internet connectivity
- Tightens Internet, intranet and extranet security
- Centralizes application of security policies across business sites
- Scales Internet bandwidth as business needs change
- Frees up resources to focus on mission-critical tasks

Features

- Transparent, stateful firewall
- Static and many-to-one Network Address Translation (NAT)
- VPN tunneling through static NAT
- Hardened external DNS
- Multiple DMZ policy definitions for unique network segments
- Flexible bandwidth options based on customer requirements
